```
Mutant alpha-amylase from Bacillus species comprising a methionine substitution - with improved stability and activity at low pH, for use in detergents, dishwashing agents and liquefaction agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence os that of the Asoergillus oryzae alpha amylase, sold commercially as FUNGAMYL (TM) by Novo Nordisk A/S. The sequence can be mutated by substitution of one or more of its methionine residues for any amino acid other than cysteine. The mutant alpha-amylase exhibits a better activity level and better stability in the presence of oxidising as moderately low pH: The enzyme can be used as an additive for detergents, dishwashing agents can be used as an additive for MAR-2003 to correct PN field.)

Oxidation stable alpha amylases can be used for the simultaneous desizing and bleaching or scouring of a fabric comprising starch or starch derivatives. They exhibit a better heat stability, especially in the presence of oxidising agents. They are obtained from a parent alpha amylase by replacing one or more methionine residues with any amino acid different from Cys or Met, preferably Leu, Thr, Ala, Gly, Ser, Ile or Asp. The parent alpha amylase is pref. derived from a Bacillus species, although alpha amylases of fungal origin can also be used. This sequence is the wild type (unmodified) alpha amylase of Aspergillus oryzae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of an oxidation stable alpha-amylase - for simultaneous desizing and bleaching or scouring of fabrics contg. starch or starch derivs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Variant alpha amylase enzymes which have improved washing and/or as detergent additives. The enzymes have one or more amino acid residues added, deleted or substituted. The variants can also be used for textile desizing prior to scouring, bleaching and dyeing. The variants have improved thermostability, acid/alkaline stability; low temperature optimum; pH optimum; higher hydrolysis velocity and improved colerance to obtain composition constituents, e.g. oxidation agents. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Variants of parent termamyl- and fungamyl-like alpha-amylases (and methods of constructing them) are claimed. Examples of variants are featured above. The variants have altered properties such as calcium dependency, substrate binding and stability. Also one or more proline or cysteine residues in the variant is modified or replaced with a non-proline or non-cystein residue such as alanine. The variants can be used for (dish) washing, as detergent additives or for fabric desizing or starch liquefaction. They can also be used for the production of sweeteners and ethanol from starch. See also AAW14498-99

    have altered
binding and stability.

                          a variant) corresponding to 196-198 of AAW14499 is deleted or replaced with a fragment corresponding to

Producing heterologous biological substance comprises culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance and recovering heterologous biological
                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method of producing heterologous biological substance. The method involves culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance, where mutant strain comprises first nucleotide sequence encoding heterologous biological substance and second nucleotide heterologous biological substance of glucomylase (glaA) and recovering heterologous biological substance. The present sequence is the Aspergillus niger neutral alpha-amylase A (amyA) protein.
                                                                                                                                                                                                                             Producing heterologous biological substance comprises culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance and recovering heterologous biological

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a fungamyl-like alpha-amylase. The specification describes variants of this fungamyl-like alpha-amylase, which have an alteration in one the amino acid regions 98-110, 150-160, 151-167, 280-288, 448-455, and 468-475. Each alteration is a deletion or substitution of an amino acid or an insertion of an amino acid downstream of a particular position. The variants retain alpha-amylase activity, and have better heat stability and/or stability at acidic pH, relative to wild-type enzyme. The variants can therefore be used at higher comperatures (more efficient conversion or faster reaction, and have reduced need for cooling and reduced risk of contamination). The variants of glucoamylase during dextrinisation. The variants are used to produce syrups, particularly of high maltose content, or alcohol, from starch; as dough improver for baked goods; in brewing, to increase fermentability of the wort; and for liquefaction of starch

The present invention relates to a method of producing heterologous halological substance. The method involves culturing mutant of wild-type happergillus niger strain in medium suitable for producing heterologous biological substance, where mutant strain comprises first nucleotide sequence encoding heterologous biological substance and second nucleotide sequences comprising medification of glucoamylase (glash) and recovering heterologous biological substance. The present sequence is the Aspergillus niger neutral alpha-amylase B (amyB) protein.

Novel polynucleotide encoding hyperthermophilic processing enzymes e.g. alpha-amylase, useful for producing plant to produce food products having improved taste or fermentable substrates for ethanol.

Claim 1; Page 107; 158pp; English

The present invention describes polynucleotides which encode processing enzymes (e.g. alpha-amylase, pullulanase, alpha-glucosidase, glucose enzymes (e.g. alpha-amylase) that are optimised for expression in plants. The polynucleotides encode mesophilic, thermophilic or hyperthermophilic processing enzymes, which are activated under suitable conditions to act pubor the desired substrate. Also described are self-processing transgenic plants and plant parts, e.g. grain, which express one or more of these enzymes and have an altered composition that facilitates plant and grain processing. Also described is a method (M) for converting starch to atach-derived products in a transformed plant part (TPP), by activating the starch processing enzyme contained in it. Transgenic grain is useful for preparing maltodextrin. A transformed plant (TP) can be used to produce food products having improved taste and to produce fermentable

```
ö
 (M) eliminates the need
              to mill or physically disrupt the integrity of plant parts prior to recovery of starch-derived products. The present sequence represents alpha-amylase/glucoamylase fusion protein, which is given in the exemplification of the present invention
                                                                                                                                                                         Gaps

Novel isolated Aspergillus fumigatus polypeptide, useful in various industries such as those involved in the making of food and feed, beverages, textiles and detergents.

Claim 17; Page 134-35; 169pp; English.

The sequences given in ABBB0164-87 show enzymatic proteins derived from A. fumigatus. These proteins display the catalytic activity of an enzyme such as tannase, callulase, glucose oxidase, glucoamylase, phytase, betagalactosidases, invertase, lipase, alpha-amylase, laccase, polygalacturonase or xylanase. Compositions comprising the tannase are useful for modulating the amount of compounds that composition. Compositions comprising the amount of cellulose in a composition. Compositions comprising glucose oxidase are useful for modulating the amount of myo-inositol phosphates in a composition. Compositions comprising comprising the amount of macount of modulating the amount of composition. Compositions comprising comprising the amount of lactose in a composition. Compositions comprising comprising the amount of sucrose in a composition. Composition of comprising the amount of sucrose in a composition. Composition of sucrose in a composition. Composition of sucrose in a composition comprising the amount of sucrose in a composition of sucrose in a composition.

```
modulating the amount of glyceride in a composition. Compositions comprising alpha-amylases are useful for modulating the amount of starches or maltodextrins in a composition. Compositions comprising laccase are useful for modulating the amount of oxidated phenolic compounds in a composition. Compositions comprising polygalacturonases are useful for modulating the amount of high or low molecular weight polygalacturonic acid chains in a composition. Compositions comprising polygalacturonases are useful for modulating the amount of xylan or xylo-oligomers in a composition. The A. fundiating the amount of xylan or xylo-oligomers in a composition. The A. fundiating proteins and corresponding DNA's are useful in various industries such as those involved in the making of food and feed, beverages, textiles such as those involved in the making of food and feed, beverages, textiles and detergents. The DNA's are useful to express recombinant enzymes for characterization, modification or industrial uses, to compare with the nucleotide sequence of A.funigatus to identify duplicated genes of paralogs having the same or similar blochemical activity and/or function, to compare with nucleic acid sequence of other related or distant fungal organisms to identify contained or distant fungal organisms to identify patterns, and to raise anti-protein antibodies. The polypeptide having cannase activity increases the yield of tea liquor from tea leaves, improves the colour, flavour and health benefite of tea products, particularly an instant tea product. The polypeptide having cellulase activity enhances cleaning ability of detergent compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

cc amylase. Manufacturing maltogenic amylase comprises the following steps:

(i) obtaining a gene of maltogenic amylase from Thermus sp. IM6501 (KCTC 5027BP) and inserting the gene into plasmid put119 to construct crecombinant DNA (pThMA119); (ii) inserting the recombinant DNA to Escherichia coli MC1061, which is cultivated at 37 plus degrees Celsius of Escherichia coli MC1061, which is cultivated at 37 plus degrees Celsius con Dotain a microbial cell; (iii) suspending the microbial cell with buffer colution at pH 7.5 and obtaining supernatant; and (iv) passing the colution at pH 7.5 and obtaining supernatant; and (iv) passing the contionant through column chromatography and obtaining purified complexed. The maltogenic amylase is a dimer comprised of two maltogenic amylase molecules, and a Thermus sp. IM6501 maltogenic amylase (ThMA) crystal. The amylase has a structure containing an activated cregion that consists of amino acid residues of Asp. 228, Glu-357, Asp-424, CC region that consists of amino acid residues of amino acid residues of millo and Hisliso. The present sequence represents Aspergillus oryzae TAKA containing in comparison with ThMA in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is an alpha-amylase enzyme of the filamentous fungus Aspergillus niger. Alpha-amylases catalyse the endohydrolysis of 1,4-alpha-glinkages in oligosaccharides and polysaccharides. The alpha-amylase polynucleotides and polypeptides of the invention are useful in a baking process
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotide from a filamentous fungus, preferably Aspergillus
                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

A thermostable alpha-amylase (AAR88212) of Thermomyces lanuginosus CBS 224.63 is expressed in Aspergillus niger hosts using a gene (AAT10562) isolated from a T. lanuginosus gene library. The recombinant enzyme (54-60 kDa) shows optimal activity at 60-70 deg and pH 5.8-6, has a pI of 3.7 and is active at 60-80 deg. (Updated on 16-0CT-2003 to standardise OS
                                                                                                                                                                                                                                                                                                                                                                                                                                   Thermophilic alpha-amylase with activity range of 60-80 degrees C -derived from Thermomyces lanuginosus, useful in the prepn. of foodstuffs and bakery prods. esp. bread.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to promoter functional in a plant cell, where the promoter is positioned to promote for expression of a polynucleotide encoding a polypoptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a crop plant such as maize or soybean. The method of producing a transformed plant cauch as maize or soybean. The method of producing a plant with the secombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for improving plants with the recombinant DNA construct is useful for improving plants with construct is useful for producing plants with conserance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth rate by modification or producing improved plant growth and development under at least on stress condition, improved lightin production or improved galactomannan condition, improved lightin producing or a bacterial polypeptide used in the grown part of the printed specification but was obtained in electronic form part of the printed specification but was obtained in electronic cornar from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                 New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

The invention relates to a recombinant bush constituct comprising a promoter in a plant cell, where the promoter is positioned to promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymotlocide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property comprises transformed plant with the recombinant DNA construct and growing the transformed plant where the recombinant DNA construct and growing the transformed plant where the recombinant DNA construct is useful for producing plants with the polymotlectide or polypeptide is useful for producing plants with the improved plant properties. e.g. improved cold, heat or drought tolerance, improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cold cold in the cold cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or providing improved plant growth and development under at least one stress content, improved lighth production or improved galactomannan content improved lighth production or improved galactomannan contition, mater of the printed specification but was obtained in electronic form part of the printed specification but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

A; Residues: 1-499 cSHI>
C; Function:
A; Residues: 1-499 cSHI>
C; Function:
A; Poscription: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A; Pathway: glycogen/starch degradation
C; Superfamily: Aspergillus alpha-amylase; hydrolase; polyaaccharide degradation
C; Superfamily: Aspergillus alpha-amylase; bydroclase; polyaaccharide degradation
F; 1-21/Domain: signal sequence #status predicted cAIP>
F; 21-499/Product: alpha-amylase core homology cAMY>
F; 184-321/Domain: alpha-amylase core homology cAMY>
F; 188-binding site: carbohydrate (Asn) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cydrocession: JT0466

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A; Description: hydrolyzes raw starch, degrading both alpha-1,4 and alpha-1,6 linkages A; Pathway: glycogen/starch degradation
C; Superfamily: Lipomyces alpha-amylase; alpha-amylase core homology; glucoamylase starch
C; Superfamily: Lipomyces alpha-amylase; alpha-amylase core homology; glucoamylase starch
C; Keywords: extracellular protein; glycoprotein; glycosidase; hydrolase; polysaccharide
F; 1-28/Domain: signal sequence #status predicted <ATG>
F; 48-141/Domain: alpha-amylase starch-binding domain homology <ABD>
F; 320-447/Domain: alpha-amylase core homology <AMY>
F; 320-447/Domain: alpha-amylase core homology <AMY>
F; 344/Finding site: carbohydrate (Asn) (covalent) #status predicted
F; 334, 344/Active site: His, Glu, Asp #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hypothetical protein - Arabidopsis thaliana (Grees)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 7, A

GENERAL INFORMATION:
APPLICANT: MATSUI, IKUO
APPLICANT: ISHIKAWA, KAZUHIKO
APPLICANT: MIYAIRI, SACHIO
APPLICANT: HONDA, KOICHI
TILLE OF INVENTION: VARIANT-TYPE CARBOHYDRATE HYDROLASE,
TITLE OF INVENTION: VARIANT GENE OF THE ENZYME AND METHOD FOR PRODUCING
TITLE OF INVENTION: OLIGOSACCHARIDE USING THE ENZYME
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0; Indels

New variant of Fungamyl-like alpha-amylase, useful for production of malcose syrups, includes mutations that improve stability against heat and acidic pH.

Claim 1; Page 42-45; 49pp; English.

The present sequence represents a fungamyl-like alpha-amylase. The specification describes variants of this fungamyl-like alpha-amylase, which have an alceration in one the amino acid regions 98-110, 150-160, 161-167, 280-288, 448-455, and 468-475. Each alteration is a deletion or substitution of an amino acid or an insertion of an amino acid downstream of a particular position. The variants retain alpha-amylase activity, and have better heat stability and/or stability at acidic ph, relative to wild-type enzyme. The variants can therefore be used at higher removerse (more efficient conversion or faster reaction, and have reduced need for cooling and reduced risk of contamination). The variants amay also be used in conjunction with other enzymes, particularly gluccoamylase during dextrinisation. The variants are used to produce

The present invention relates to a method of producing heterologous bological substance. The method involves culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance, where mutant strain comprises first nucleotide sequence encoding heterologous biological substance and second nucleotide sequences comprising modification of glucomytase (glash) and recovering heterologous biological substance. The present sequence is the Aspergillus niger neutral alpha-amylase B (amyB) protein.
                                            mutant of
                                                                                                                                                                                                                                                                                                                                                                                                                 120

The enzymes have one or more amino acid residues added, deleted or substituted. The variants can also be used for textile desizing prior to scouring, bleaching and dyeling. The variants have improved thermostability, acid/alkaline stability; low temperature optimum, ph optimum, higher hydrolysis velocity and improved tolerance context composition constituents, e.g. oxidation agents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method of producing heterologous biological substance. The method involves culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance, where mutant strain comprises first nucleotide sequence encoding heterologous biological substance and second nucleotide sequences comprising medification of glucosmylase (glash) and recovering heterologous biological substance. The present sequence is the Aspergillus niger neutral alpha-amylase A (amyA) protein.
                                                                                                                                                                                                                                                                                                                                               φ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        301

They exhibit a better heat stability, especially in the presence of oxidising agents. They are obtained from a parent alpha amylase by replacing one or more methionine residues with any amino acid different from Cys or Met, preferably Leu, Thr, Ala, Gly, Ser, Ile or Asp. The parent alpha amylase is pref. derived from a Bacillus species, although alpha amylases of fungal origin can also be used. This sequence is the wild type (unmodified) alpha amylase of Aspergillus oryzae

Variants of parent termamyl- and fungamyl-like alpha-amylases (and methods of constructing them) are claimed. Examples of variants are featured above. The variants have altered properties such as calcium dependency, substrate binding and stability. Also one or more proline or cysteine residues in the variant is modified or replaced with a non-proline or non-cystein residue such as alanine. The variants can be used for (dish) washing, as detergent additives or for fabric desizing or starch liquefaction. They can also be used for the production of search liquefaction.                                                                                                                                                                    B
                                                                                                                                                                                            ò
                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                       The present invention describes polynucleotides which encode processing enzymes (e.g. alpha-amylase, pullulanase, alpha-glucosidase, glucose isomerase, or glucoamylase) that are optimised for expression in plants. The polynucleotides encode mesophilic, thermophilic or hyperthermophilic processing enzymes, which are activated under suitable conditions to act upon the desired substrate. Also described are self-processing transgenic plants and plant parts, e.g. grain, which express one or more of these enzymes and have an altered composition that facilitates plant and grain processing. Also described is a method (M) for converting starch to starch-derived products in a transformed plant part (TPP), by activating the starch processing enzyme contained in it. Transgenic grain is useful for preparing maltodextrin. A transformed plant (TPP) can be used to produce food produces having improved taste and to produce fermentable substrates for ethanol and fermented beverages. (M) eliminates the need to mill or physically disrupt the integrity of plant parts prior to recovery of starch-derived products. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        140
                                                                                                                                                                                                                                                                                                                                                                            Novel polynucleotide encoding hyperthermophilic processing enzymes e.g. alpha-amylase, useful for producing plant to produce food products having improved taste or fermentable substrates for ethanol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       201 DVVKNEWYDWVGSLVSNYSIDGLRIDTVKHVQKDFWPGYNKAAGVYCIGEVLDGDPAYTC 260

The sequence can be mutated by substitution of one or more of its methionine residues for any amino acid other than cysteine. The mutant alpha-amylase exhibits a better activity level and better stability in the presence of oxidising agents than previous mutant alpha amylases, and improved thermostability at moderately low pH. The enzyme can be used as an additive for detergents, dishwashing agents and liquifaction agents. (Updated on 25-MAR-2003 to correct PN field.)

This sequence represents the mature form of taka-amylase from A. oryzae. This sequence was used in a method for the generation of mutant pullulanases for use in the food industry (see also AAR79026-28). The wild type pullulanase enzyme was modified by the method of the invention for enhancing the hydrophobicity of a selected site of the pullulanse. The method comprises replacement of a group in the selected site with a hydrophobic group, replacement of an amino acid with a hydrophobic and/or insertion or deletion of a hydrophobic amino acid, and/or insertion or deletion of a hydrophobic amino acid from the selected site. The method was used to produce neopullulanases Y377F,
                                                                                                                                                                                                                                                                                                                                                                                                                                           PYONVMDGVLNYPIYYPLLNAFKSTSGSMDDLYNMINTVKSDCPDSTLLGTFVENHDNPR 320

2.2.1.133) having improved transplaces manufacturing mattered in a crystallisation and the three dimensional structure of maltogenic amylase. Manufacturing maltogenic amylase comprises the following using crystallisation and the three dimensional structure of maltogenic amylase comprises the following steps:

(i) obtaining a gene of maltogenic amylase from Thermus sp. IM6501 (KCTC 5027BP) and inserting the gene into plasmid pUCl9 to construct recombinant DNA (pThMA119); (ii) inserting the recombinant DNA to hours in Luxia-Bertani (IB) media and centrifuging the media to obtain a microbial cell; (iii) suspending the microbial cell with buffer solution at pH 7.5 and obtaining supernatant; and (iv) passing the supernatant through column chromatography and obtaining purified maltogenic amylase. The maltogenic amylase is a dimer comprised of two maltogenic amylase molecules, and a Thermus sp. IM6501 maltogenic amylase (THMA) crystal. The amplase has a structure containing an activated region that consists of amino acid residues of Asp. 328, Glu-357, Asp-424, and a pocket with glucose bound that consists of amino acid residues of amino acid residues of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            , Arg81, Arg83, Prol18, Cys116, Asn1331, Glu1332, Val1329, The present sequence represents Aspergillus oryzae TAKA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein (TAA), given in comparison with ThMA in the present invention
                                                                                                                                                                                                                                                                                                                                                                           Manufacturing maltogenic amylase having improved transglycosylation activity, comprises using crystallization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               invention describes manufacturing maltogenic amylase

The sequences given in ABB80164-87 show enzymatic proteins derived from A. fumigatus. These proteins display the catalytic activity of an enzyme such as transaes, callulase, glucose oxidase, glucoamylase, phytase, betagalactosidases, invertaes, lipase, alpha-amylase, laccase, betagalactosidases, invertaes. Lapase, alpha-amylase, laccase, betagalactosidases, invertaes. Compositions comprising the amount of compositions comprising cellulase are ester linkage in a composition. Compositions comprising cellulase are useful for modulating the amount of cellulose in a composition. Compositions comprising comprising composition composition. Compositions comprising composition. Compositions comprising comprising the amount of lactose in a composition. Compositions comprising beta-galactosidases are useful for modulating the amount of lactose in a composition. Compositions comprising the amount of sucrose in a composition. Compositions comprising lipase are useful for modulating the amount of sucrose in a composition composition compositions comprising comprising the amount of sucrose in a composition c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           compounds in a composition. Compositions comportsing polygalacturonases are useful for modulating the amount of high or low molecular weight polygalacturonic acid chains in a composition. Compositions comprising polygalacturonic acid chains in a composition. Composition comprising xylanases are useful for modulating the amount of xylan or xylo-oligomers in a composition. The A. fumigatus proteins and corresponding DNA's are useful in various industries such as those involved in the making of food and feed, beverages, textiles and detergents. The DNA's are useful to express recombinant enzymes for characterization, modification or to identify duplicated genes of paralogs having the same or similar biochemical activity and/or function, to compare with nucleic acid sequence of other related or distant fungal organisms to identify potential orthologous enzyme genes, for selecting and making oligomers for attachment to a nucleic acid array for examination of expression

                                                                                                                                                                                     patterns, and to raise anti-protein antibodies. The polypeptide having tannase activity increases the yield of tea liquor from tea leaves, improves the colour, flavour and health benefits of tea products, particularly an instent tea product. The polypeptide having cellulase activity enhances cleaning ability of detergent compositions

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Taccase are useful for modulating the amount of oxidated phenolic compounds in a composition. Compositions comprising polygalacturonases are useful for modulating the amount of high or low molecular weight oplygalacturonic acid chains in a composition. Compositions comprising xylanases are useful for modulating the amount of xylan or xylo-oligomers in a composition. The A. fundatus proteins and corresponding DNA's are useful in various industries such as those involved in the making of food and feed, beverages, textiles and detergents. The DNA's are useful to express recombinant enzymes for characterization, modification or comparity duplicated genes for characterization, modification or industrial uses, to compare with the nucleotide sequence of A.fumigatus to identify duplicated genes of paralogs having the same or similar biochemical activity and/or function, to compare with nucleic acid sequence of other related or distant fungal organisms to identify sequence of other related or distant fungal organisms to identify operatement to a nucleic acid array for examination of expression patterns, and to raise anti-protein antibodies. The polypeptide having calmase activity increases the yield of tea liquor from tea leaves, improves the colour, flavour and health benefite of tea products, improves the colour, tay and health benefite of tea products, particularly an instant tea product. The polypeptide having cellulase activity enhances cleaning ability of detergent compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        unch as tannase, cellulase, glucose oxidase, glucoamylase, phytase, beta-
galactosidases, invertase, lipase, alpha-amylase, laccase,
polygalacturonase or xylanase. Compositions comprising the tannase are
useful for modulating the amount of compounds that comprise a gallate
ester linkage in a composition. Compositions comprising the
amount of glucose or oxyden in a composition.

Compositions comprising glucose oxidase are useful for modulating the
amount of glucose or oxyden in a composition. Compositions
phytase are useful for modulating the amount of myo-inositol phosphates
in a composition. Compositions comprising beta-galactosidases are useful
for modulating the amount of lactose in a composition. Compositions
comprising sucrase or invertase are useful for modulating the amount of
sucrose in a composition. Compositions comprising lipase are useful for
modulating the amount of glyceride in a composition. Compositions
comprising alpha-amylases are useful for modulating the amount of
starches or maltodextrins in a composition. Compositions
comprising alpha-amylases are useful for modulating the amount of
starches or maltodextrins in a composition. Composition
comprising alpha-amylases are useful for modulating the amount of
starches or maltodextrins in a composition. Compositions
comprising alpha-amylases are useful for modulating the amount of
starches or maltodextrins in a composition. Compositions
comprising alpha-amylases are useful for modulating the amount of
starches or maltodextrins in a composition. Compositions
comprising and composition composition compositions
comprising alpha-amylases are useful for modulating the amount of
starches or maltodextrins in a composition composition.

The invention relates to a method for producing ethanol from starch-containing material, by fermentation. The method involves carrying out a secondary liquefaction step in the presence of a thermostable acid alphamylase. The method is used in producing ethanol from a starch-containing material such as tubers, roots or whole grain (e.g. corn, wheat or barley or their combination) or combination of the materials. Preferably ethanol is produced from starch-containing material that is obtained from cereals or from corns, cobs, wheat, barley, rye, milo and potatoes or their combination. The ethanol produced by above mentioned method is used as fuel alcohol and/or fuel additive. The ethanol is also useful as drinking ethanol i.e., potable neutral spirits or industrial ethanol. The present sequence is Aspergillus niger alpha-amylase protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    263
                 Producing ethanol from starch-containing material e.g., tubers, roots, whole grain, for use in fuel, by fermentation comprises carrying out a secondary liquefaction step in the presence of a thermostable acid alpha-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     123

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          423
                                                                                                                                                                                                                                                                                                   product by holding a slurry of water and granular starch in the presence of an acid alpha-amylase and a glucoamylase at 0-20 deg C below the initial gelatinization temperature of the granular starch; holding the slurry in the presence of acid alpha-amylase, glucoamylase and yeast at 10-35 deg C to produce ethanol; and optionally recovering the ethanol. The method is used for the production of an alcohol product such as beer or recovered ethanol, e.g. fuel ethanol, potable ethanol or industrial ethanol. This sequence represents an acid fungal alpha-amylase from Aspergillus niger used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 63

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Function:
C;Function:
A;Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Pathway: glycogen/stach degradation
C;Superfamily: Aspergillus alpha-amylase; alpha-amylase core homology
C;Keywords: calcium; carbohydrate digestion; glycoprotein; glycosidase; hydrolase; polys
C;Keywords: calcium; carbohydrate digestion; glycoprotein; glycosidase; hydrolase; F;1-21/Domain: signal sequence #status predicted <SIC>

JS0663
alpha-amylase (EC 3.2.1.1) precursor - Aspergillus sp.
C.Species: Aspergillus sp.
C.Species: Aspergillus sp.
C.Species: Angelgog #sequence_revision 17-Aug-1992 #text_change 17-Mar-1999
C.Accession: JS0663
R.Shibuya, I.; Tamura, G.; Ishikawa, T.; Hara, S.
Biosci. Bloctchnol. Blochem. 56, 174-179, 1992
A.Fitle: Cloning of the alpha-amylase cDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase cDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase cDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase CDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase CDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase CDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase CDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase CDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase CDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase CDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase CDNA of Aspergillus shirousamii and its expression A.Fitle: Cloning of the alpha-amylase CDNA of Aspergillus shirousamii and its expression control of the alpha-amylase CDNA of Aspergillus shirousamii and its expression control of the alpha-amylase CDNA of Aspergillus shirousamii and its expression control of the alpha-amylase CDNA of Aspergillus shirousamii and its expression control of the alpha-amylase CDNA of Aspergillus shirousamii and its expression control of the alpha-amylase CDNA of Aspergillus shirousamii and its expression control of the alpha-amylase CDNA of Aspergillus shirousamii and its expression control of the alpha-amylase CDNA of Aspergillus shirousamii and its expression control of the alpha-amylase CDNA of Aspergillus shirousamii and its expression control of the alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

Alternate manes (BC 3.2.1.1) 3 precursor - Aspergillus oryzae

N.Alternate names: alpha-amylase isozyme I; glycogenase; Taka-amylase A

S.Abternate names: alpha-amylase isozyme I; glycogenase; Taka-amylase A

C; Becession: So6549; A33215; A44713

R; Wirsel, S.; Lachmund, A.; Wildhardt, G.; Ruttkowski, E.

Mol. Microbiol. 3, 3-14, 1989

A; Title: Three alpha-amylase genes of Aspergillus oryzae exhibit identical intron-exon o A; A; Reference number: S04549; MUID:89237897; PMID:2785629

A; Molecule type: DNA

A; Molecule type: DNA

A; Residues: 1-499 < WIR>
A; Accession: A33215
